Toptal®

Accelerate Your Path to Document Accessibility

Toptal's platform automates accessibility remediation, combining a powerful open-source engine with an enterprise-grade wrapper. For complex documents, our team provides hands-on support.

Core Application Wrapper

Toptal offers an efficient and secure solution for automating document accessibility remediation:

+ **User and identity management:** Role-based access (i.e., admin, remediator, auditor), SSO (SAML/OIDC), self-service invites, and password resets.
+ **Bulk document upload:** Drag-and-drop or file picker and metadata tagging (e.g., business unit, project code, priority).
+ **Automated remediation workflow:** Synchronous or asynchronous job queue, real-time status updates, and success/failure notifications.
+ **Reporting and audit trails:** Dashboards (remediation counts, pass/fail rates), exportable CSV/PDF reports, and complete user-action logs.
+ **Standards and security:** WCAG 2.1 AA and PDF/UA compliance, AES-256 encryption at rest, TLS 1.2+ in transit, and configurable data retention.

Professional Remediation Services

For documents that require manual intervention—complex layouts, intricate graphics, or special accessibility needs—we offer:

+ **Expert review and repair:** Accessibility audits, manual tagging, alt-text creation, and form remediation.
+ **Custom scripting and templates:** Tailor remediation scripts for recurring document types.
+ **Training and support:** Onsite or virtual workshops, best-practice guidance, and ongoing support plans.

Benefits

+ **Efficiency:** Automate ~80% of remediation tasks, allowing skilled staff to focus on higher-value work.
+ **Compliance:** Centralized tracking and audit logs reduce legal risk.
+ **Scalability:** Engine scales on demand; services scale with your most challenging needs.
+ **Visibility:** Business-unit usage reports drive accountability and continuous improvement.
